

Resizing Images for Web Use

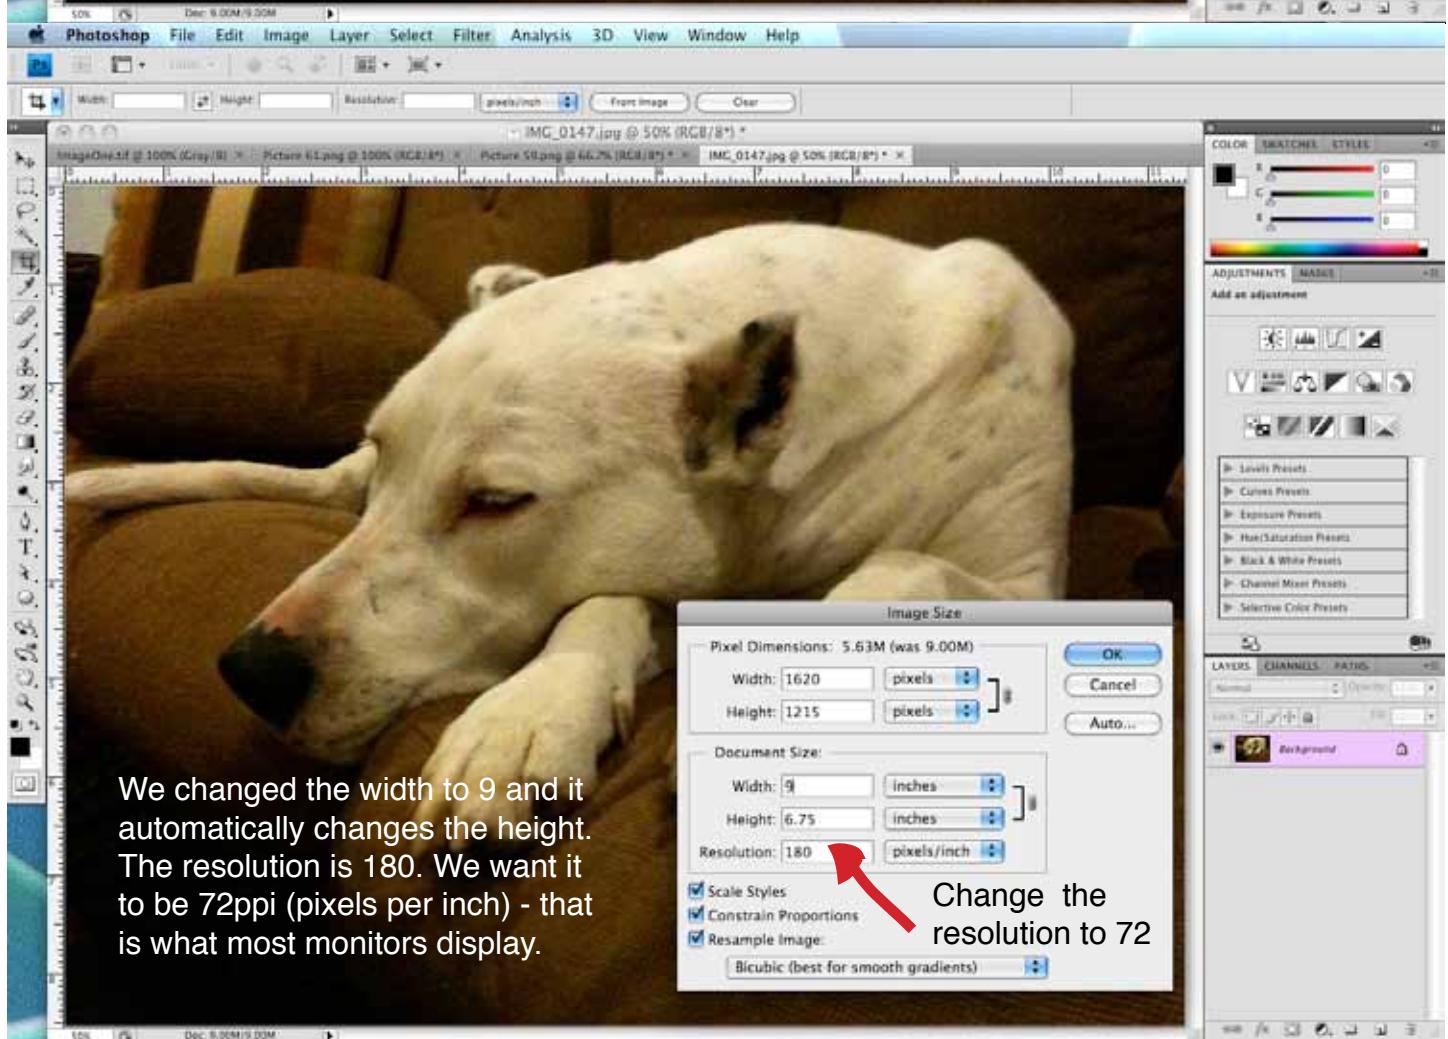

We want to resize the image to make it load faster on the web

Go to the top tool bar to **Images** and scroll down to **Image Size**

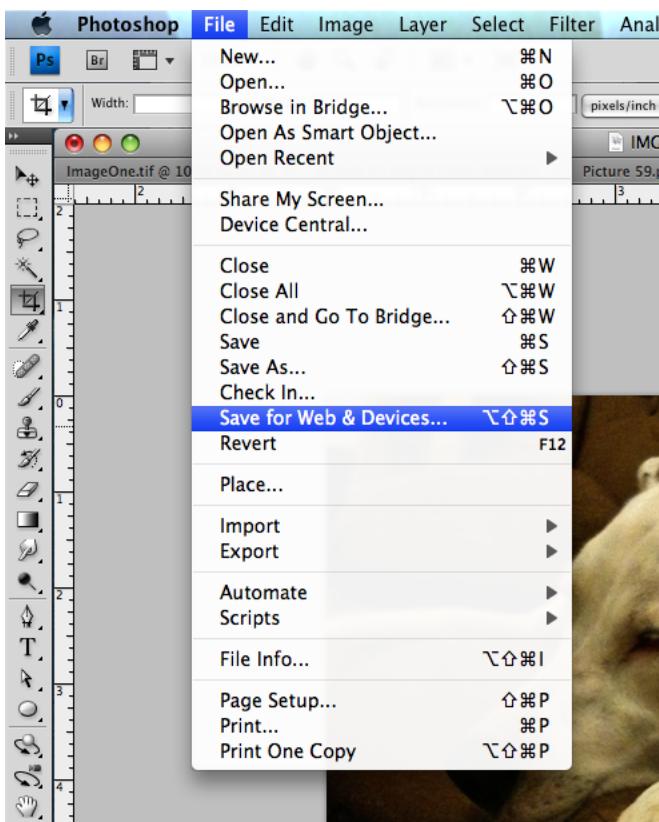

Here we see the original size -
The image is 11.379 inches wide
and 8.534 inches tall.
The resolution is 180.

We changed the width to 9 and it
automatically changes the height.
The resolution is 180. We want it
to be 72ppi (pixels per inch) - that
is what most monitors display.

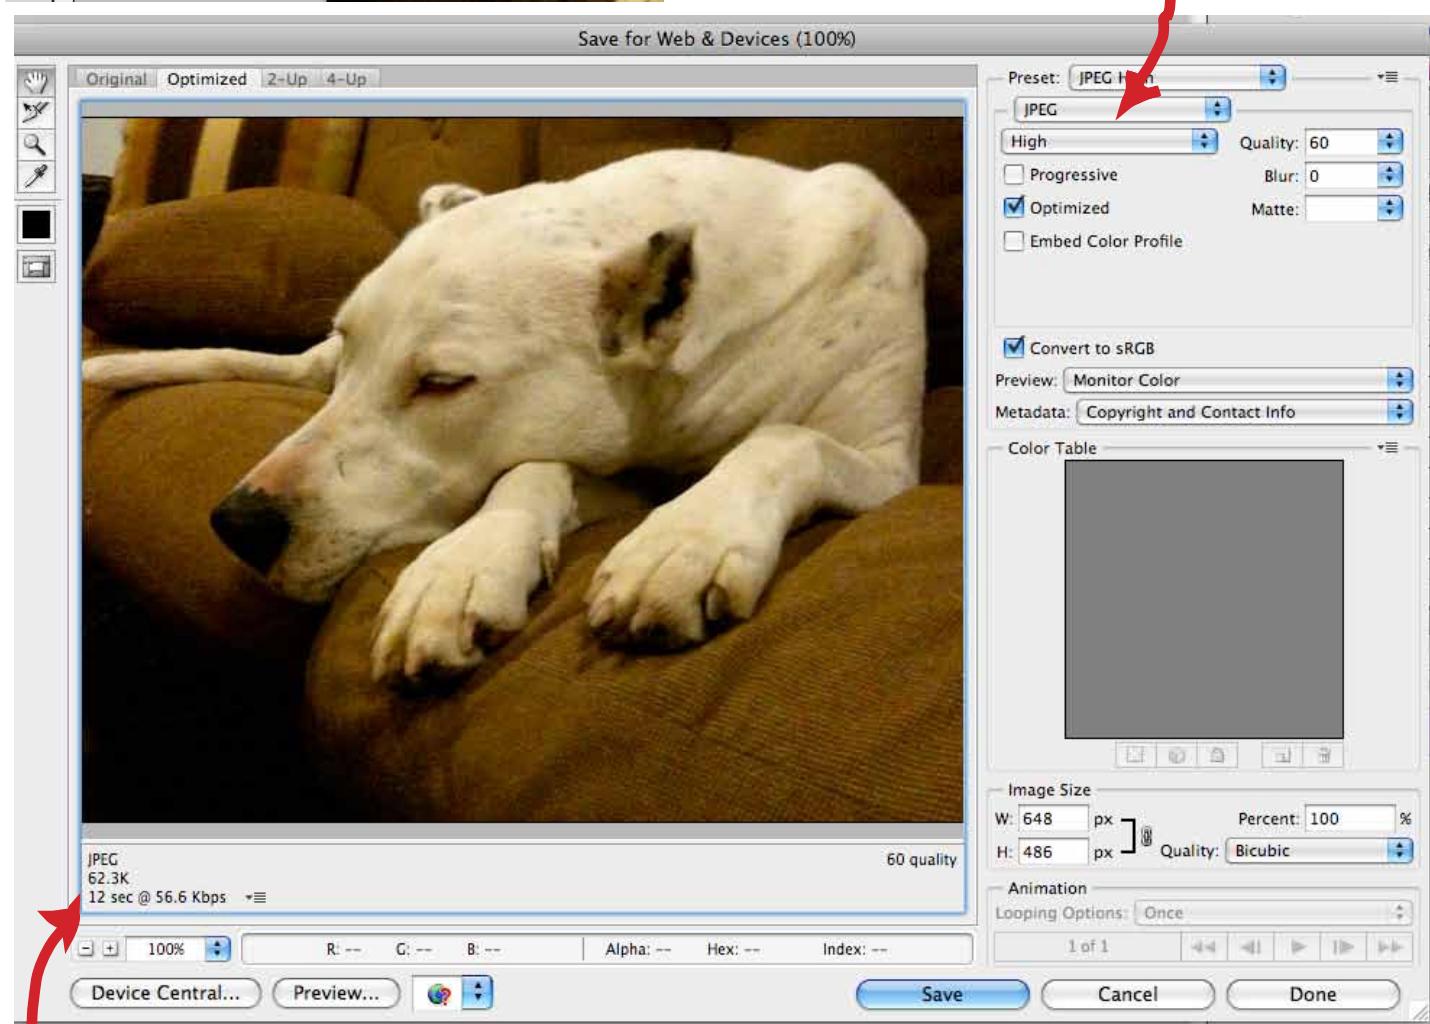

Change the
resolution to 72

Once we have changed the size and also the resolution (to 72ppi) we want to compress the file more

Use the
Save for Web & Devices option

A new window pops up
Choose the **jpeg** option

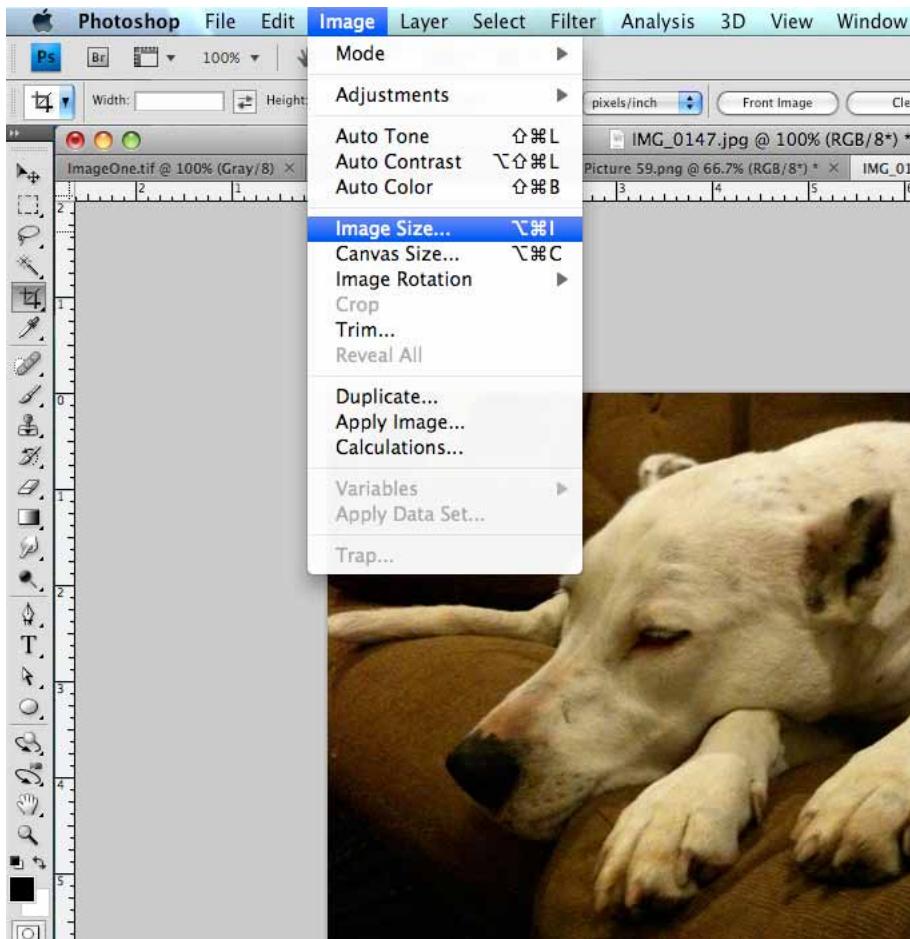

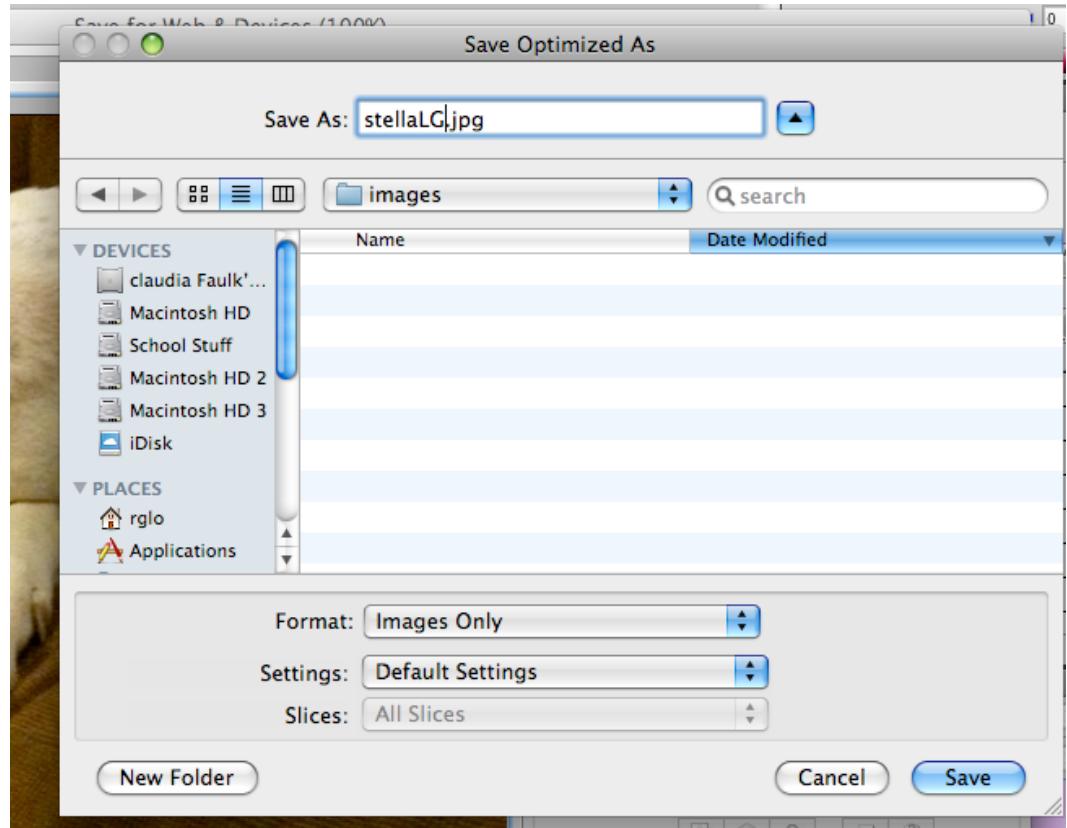

At the lower left it tells you how quickly the file would load on a 56K modem.

Navigate to your images folder. Save as a new name - I used **stellaLG.jpg**

stella - because that is her name

LG - because that is my way of remembering this is the largest of the resized files.

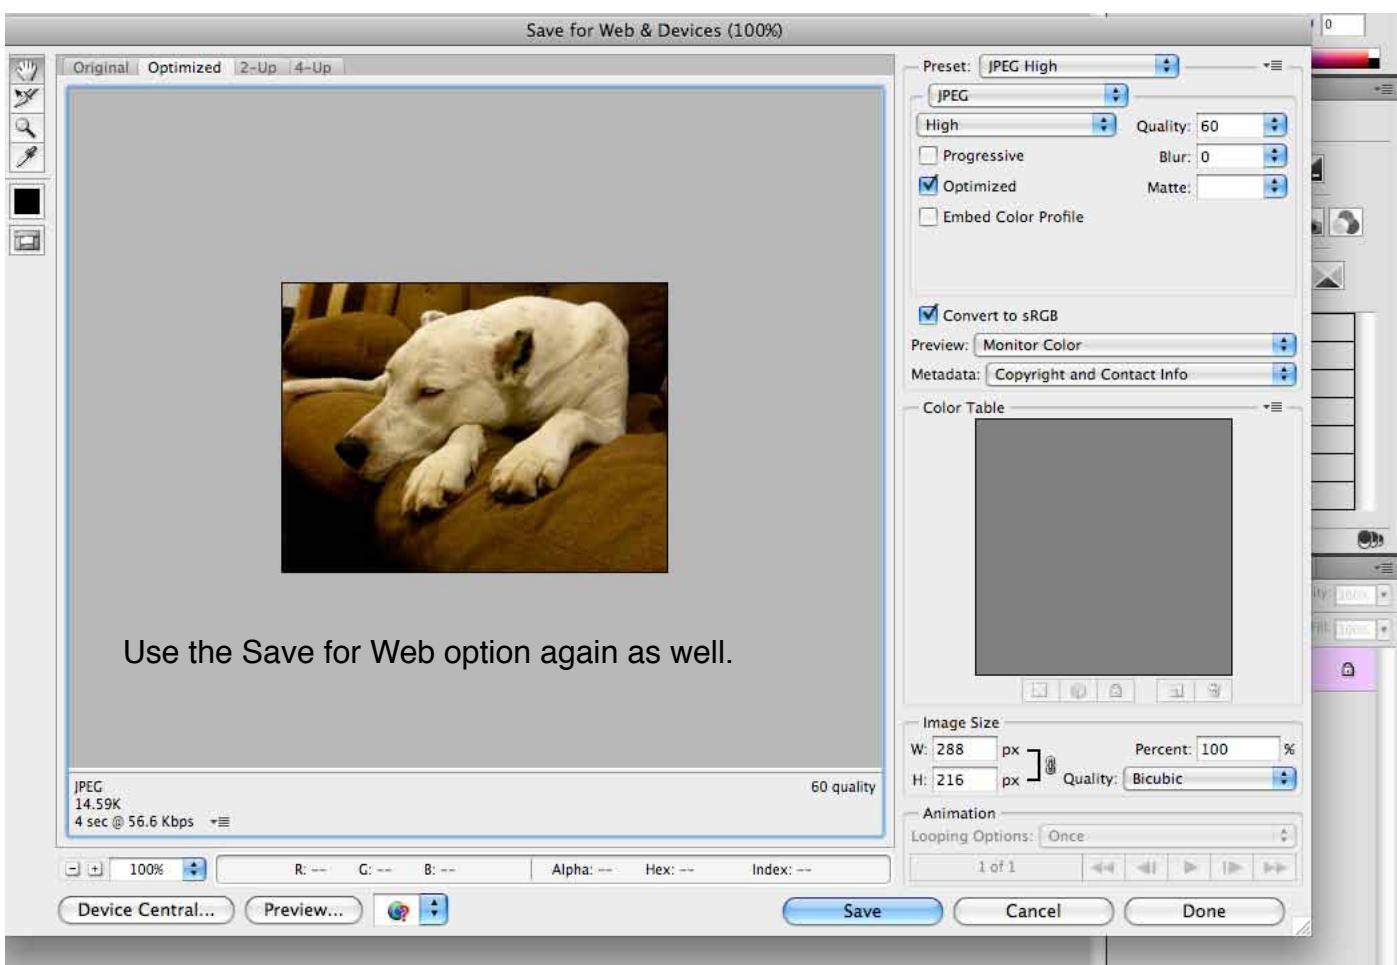

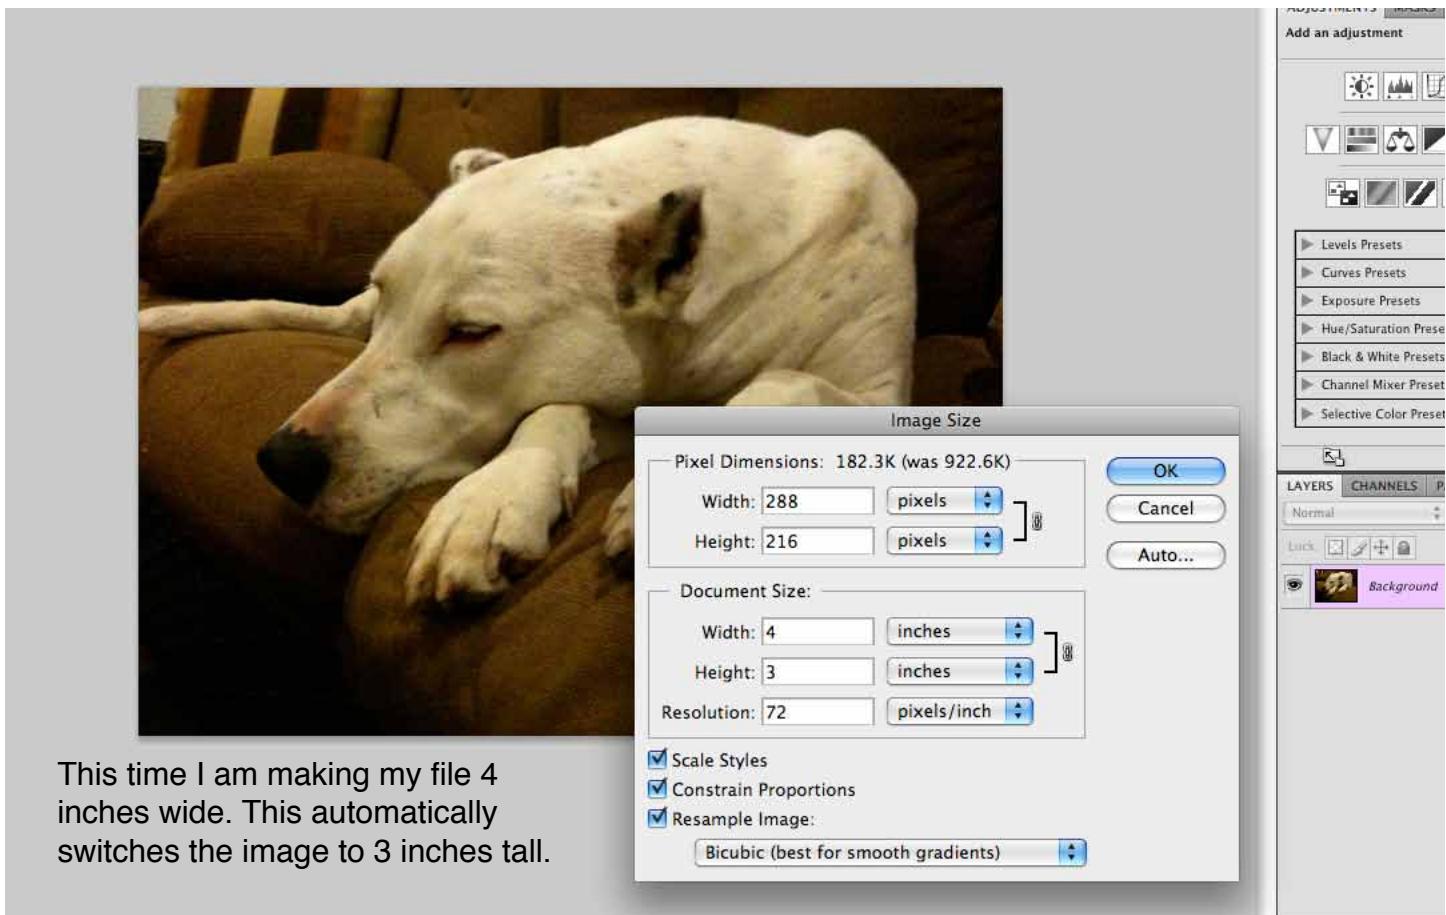

And the extension is **.jpg**

Now lets make it smaller again for our next size.

Again -- go to Image and scroll down to

Image Size

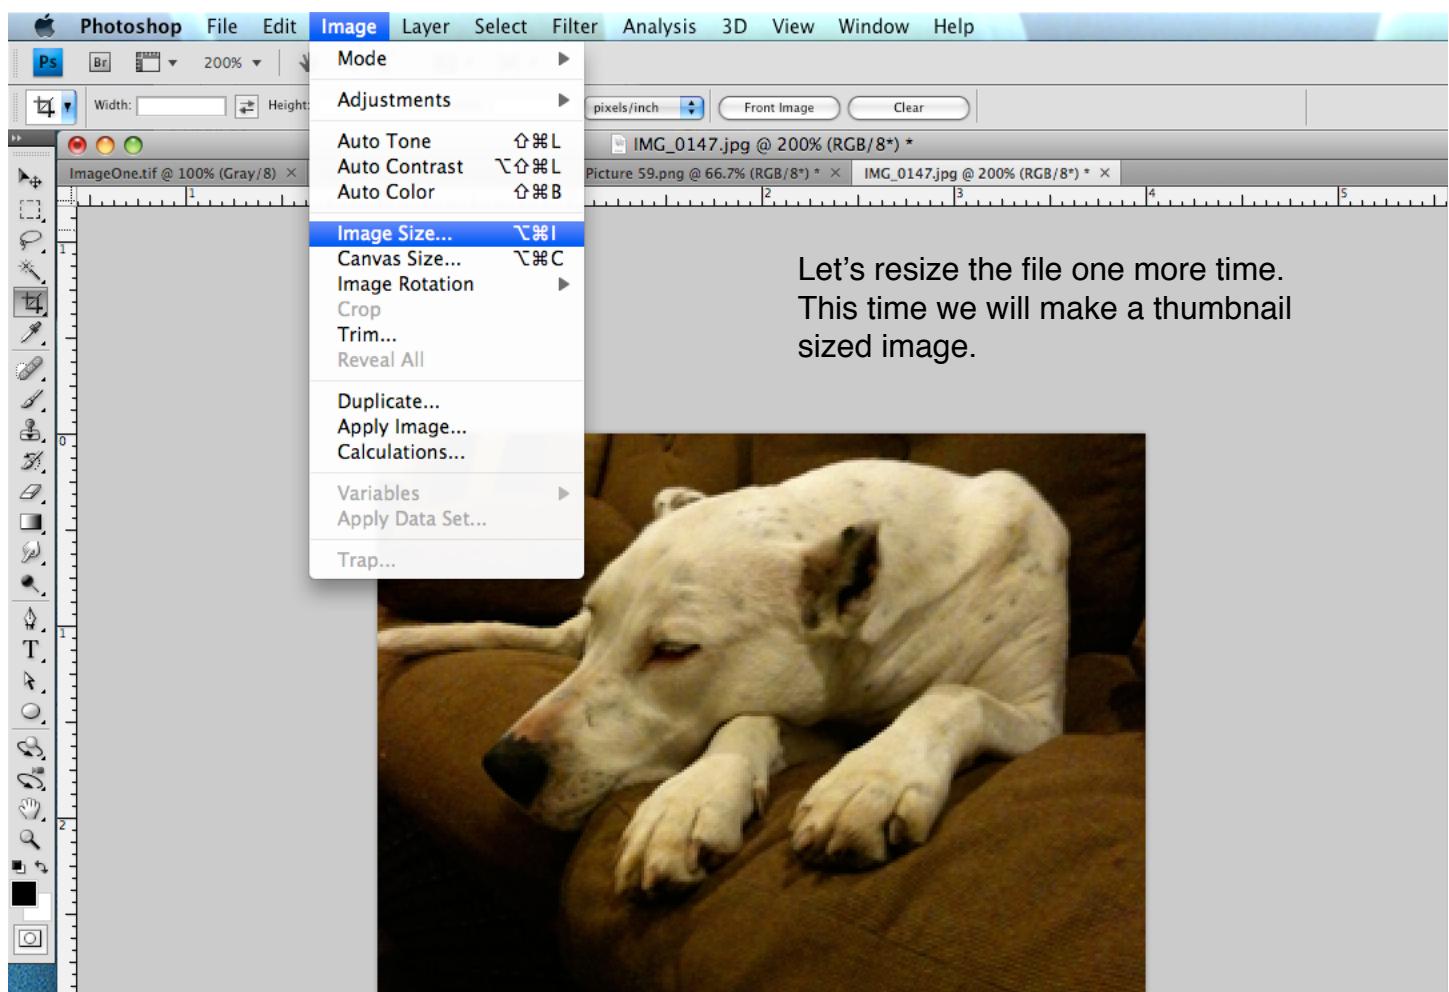

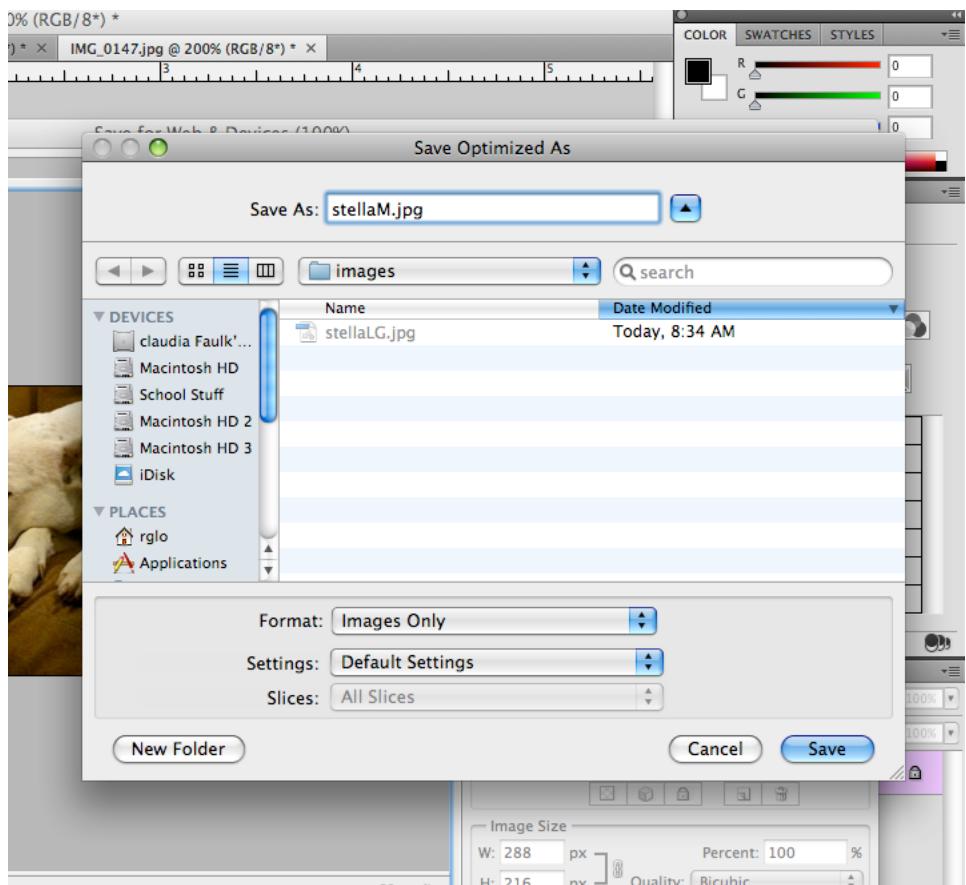

This time when I hit save it should automatically go to the images folder where I saved the last file.

Save as a new name - I used **stellaM.jpg**

I kept the **stella** - so I would remember the files go together

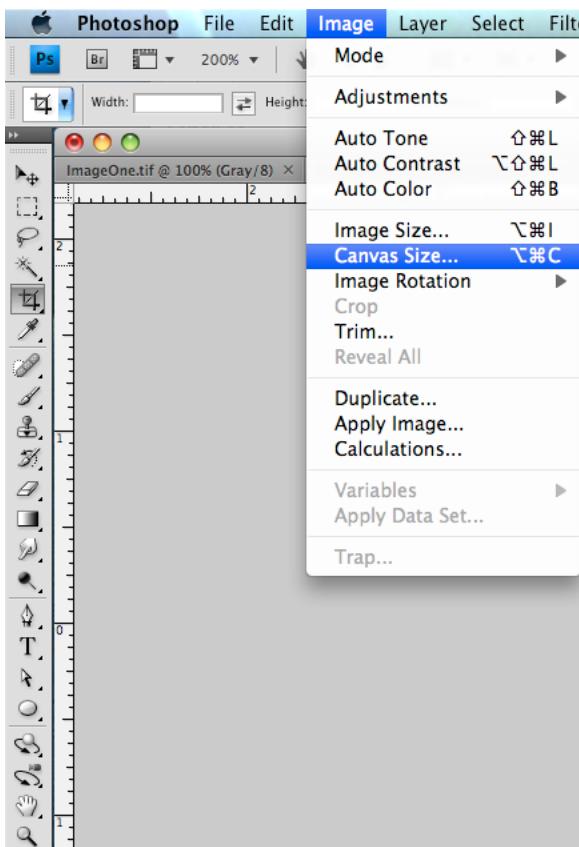

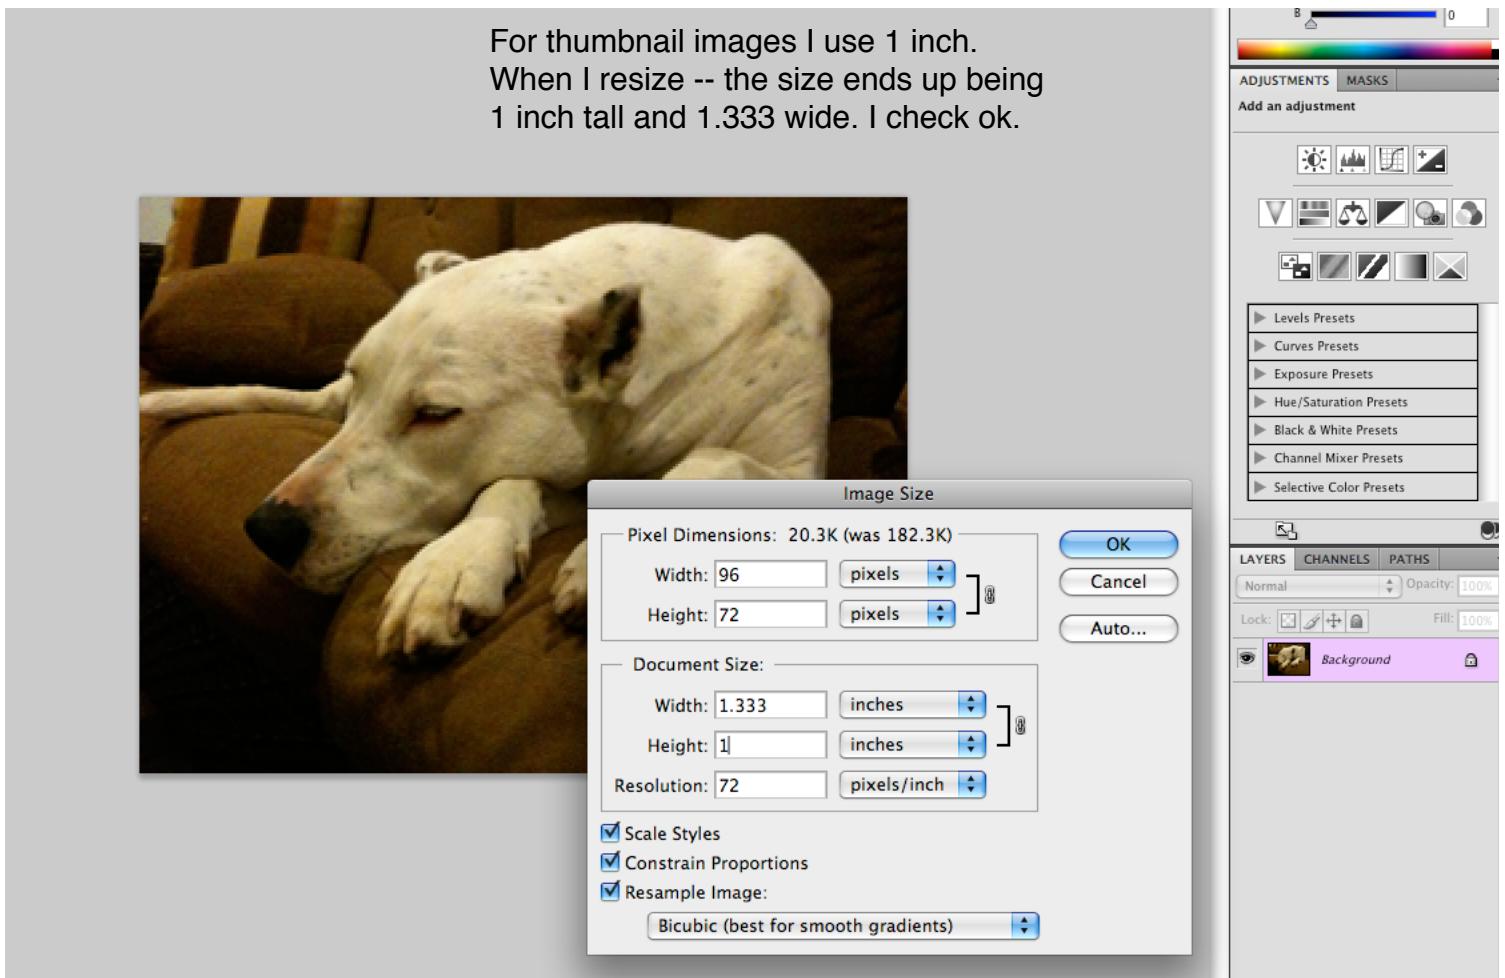

M - because that is my way of remembering this is the medium sized file.

And the extension is **.jpg** again.

Let's resize the file one more time. This time we will make a thumbnail sized image.

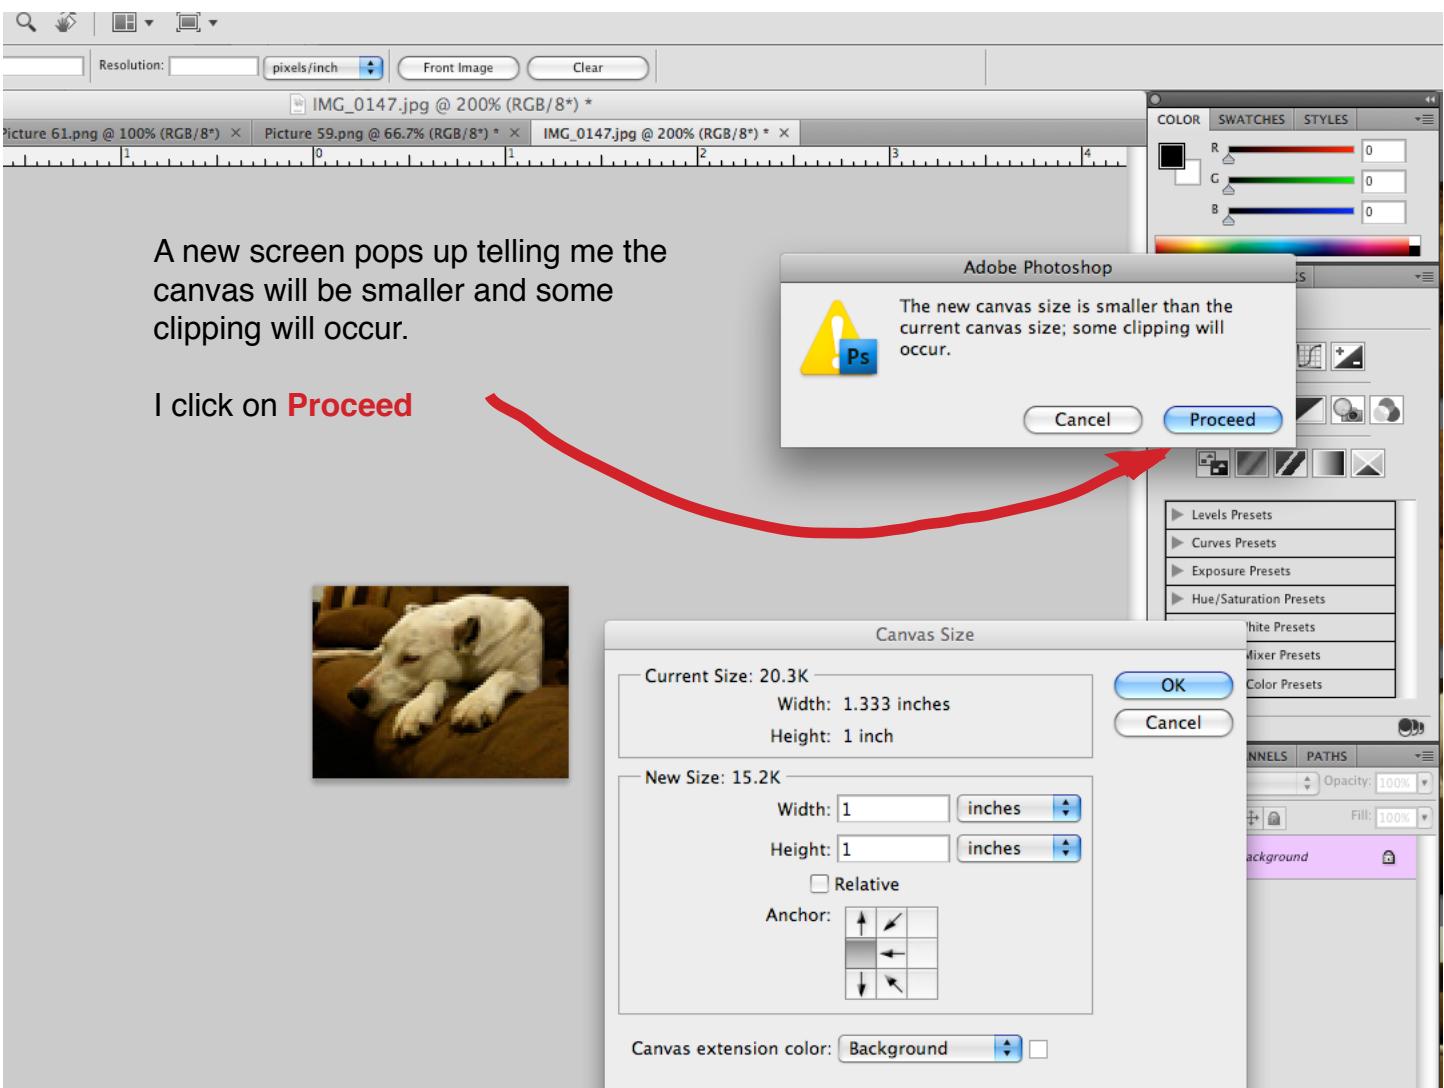

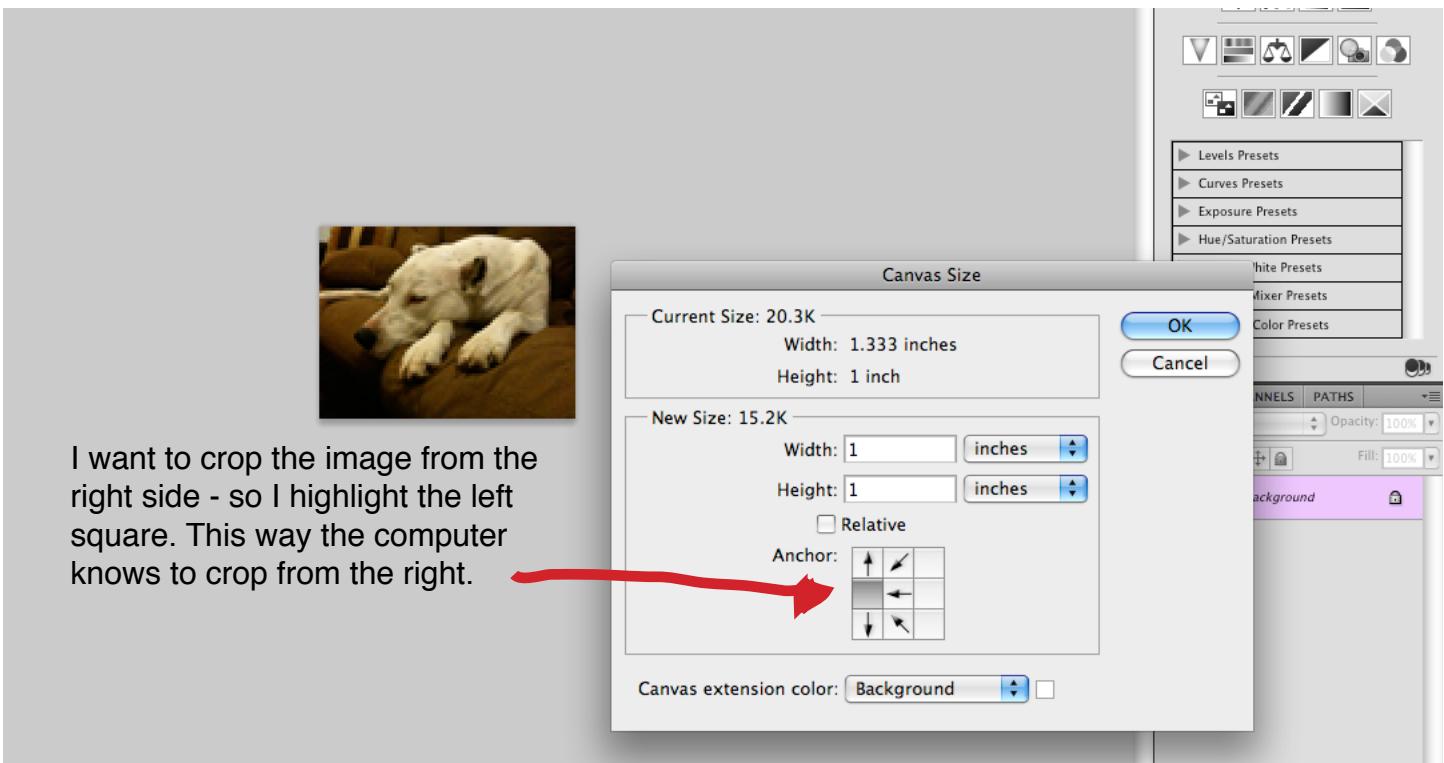

For thumbnail images I use 1 inch.
When I resize -- the size ends up being
1 inch tall and 1.333 wide. I check ok.

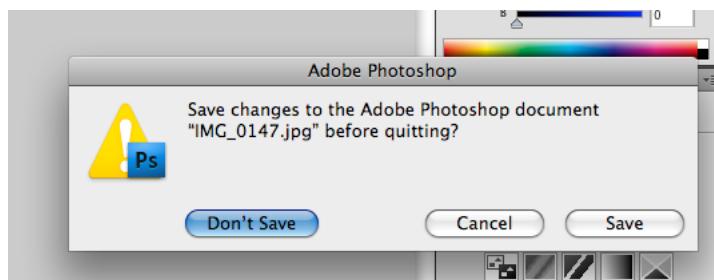

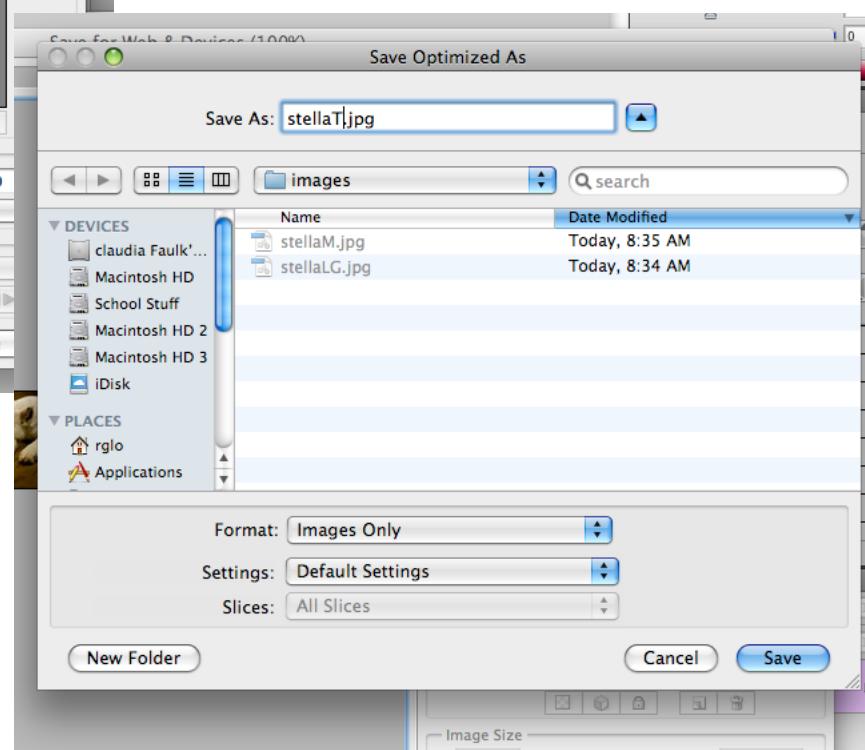

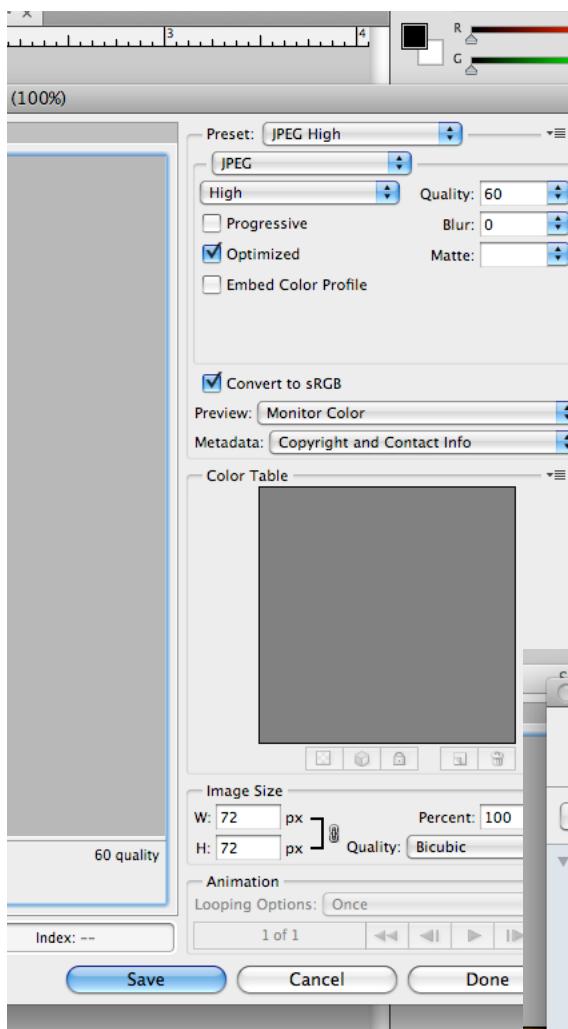

Instead of having a rectangular sized image- I want to have a square.

This time I choose the **Canvas Size** option. It is also under Images.

Once more I use the **Save for Web** option.

This time I name my file

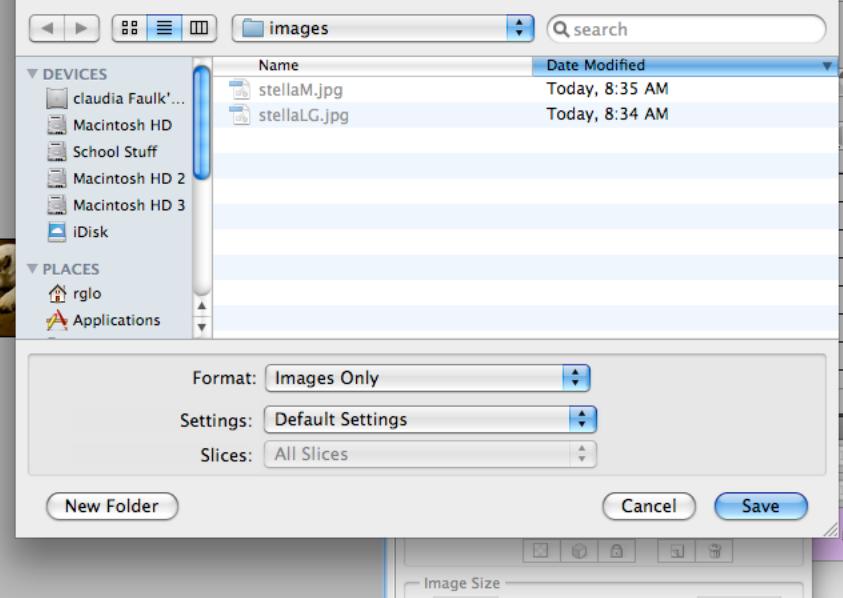

stellaT.jpg

The T is my way of telling me this is a thumbnail.

Remember **short names with NO SPACES** are the best ways to name your files.

Save Optimized As

Save As: **stellaT.jpg**

Now that I have created all three resized files I want, I will close my original file.

Photoshop will ask me if I want to save the changes to the original document

DON'T SAVE. Keep your original file intact in case you need it again
